

# LEOcoin Private Chat (PoS) wallet V3

## How to Resync your MAC OS Wallet

## How to Resync your MAC OS Wallet

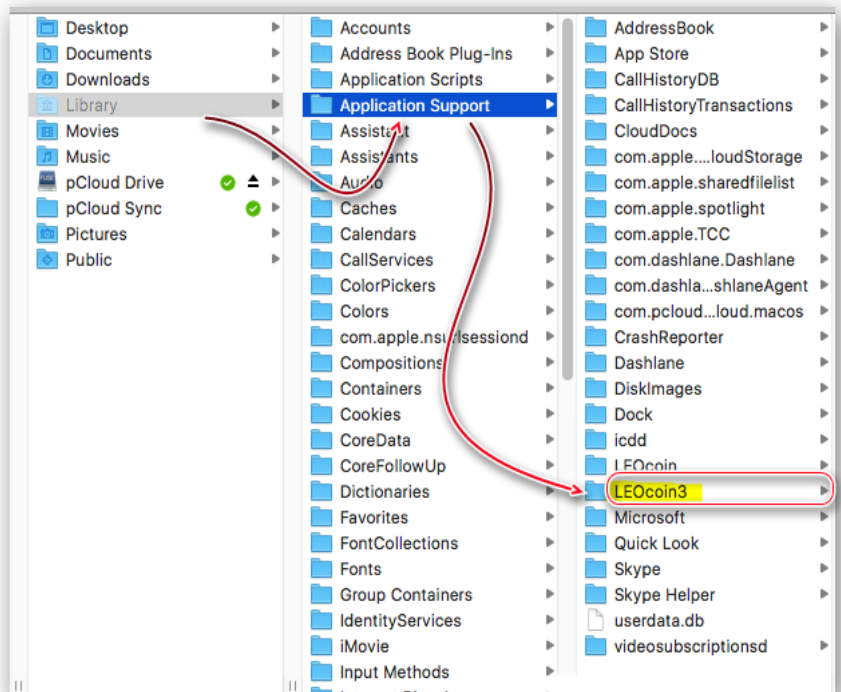

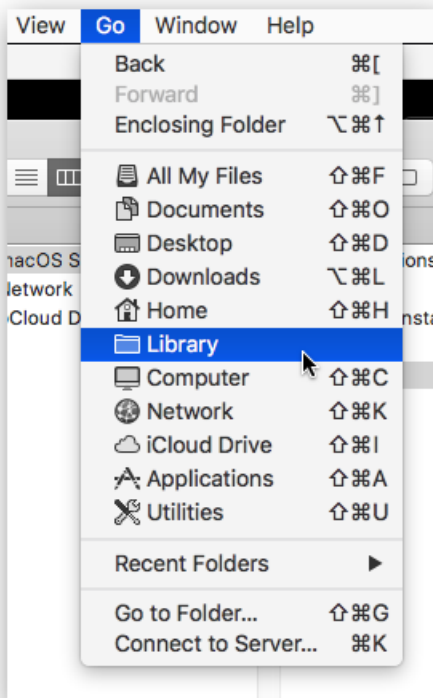

BEFORE resyncing your LEOcoin Wallet, please make sure that you back up your wallet. Please follow the Backup instructions for MAC on this page (<https://www.leocoin.org/Guides.aspx>)

1. Open Finder

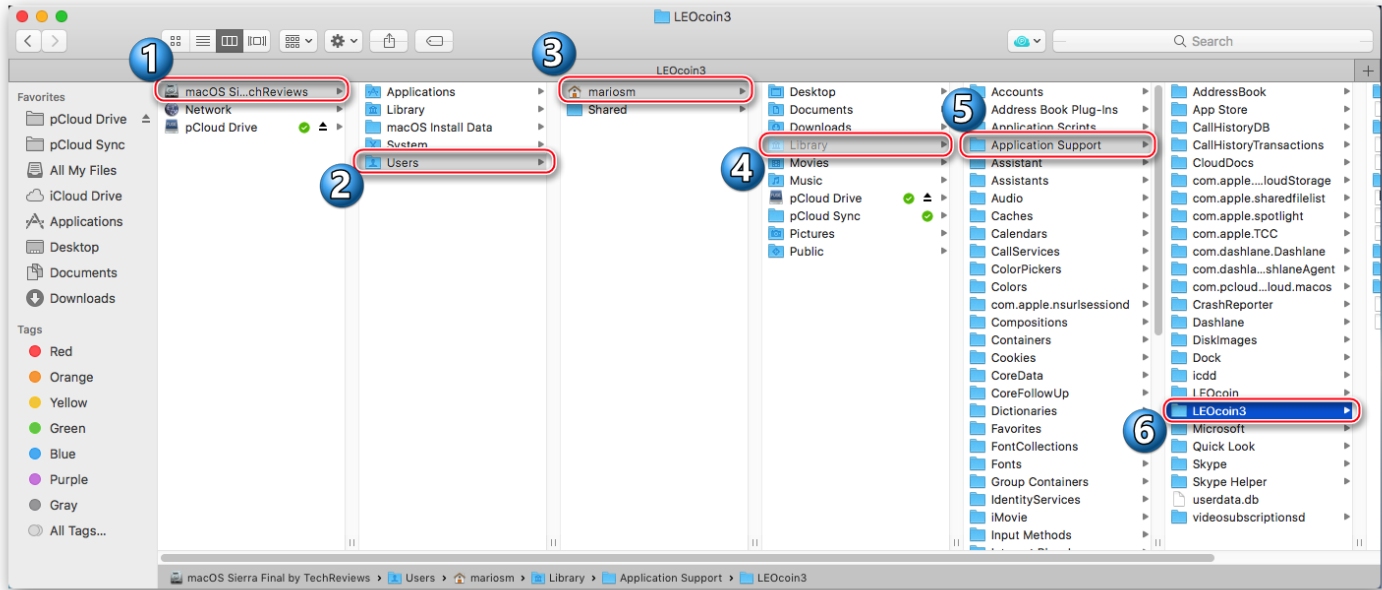

2. Now hold the ALT key and click GO on the top menu. This will show **Library** on the drop-down menu.

You may click on Library to open the **Application Support** folder and then find the **LEOcoin3** folder.

3. You may also navigate from your **macOS system**, to **Users --> 'username' --> Library --> Application Support --> LEOcoin3**.

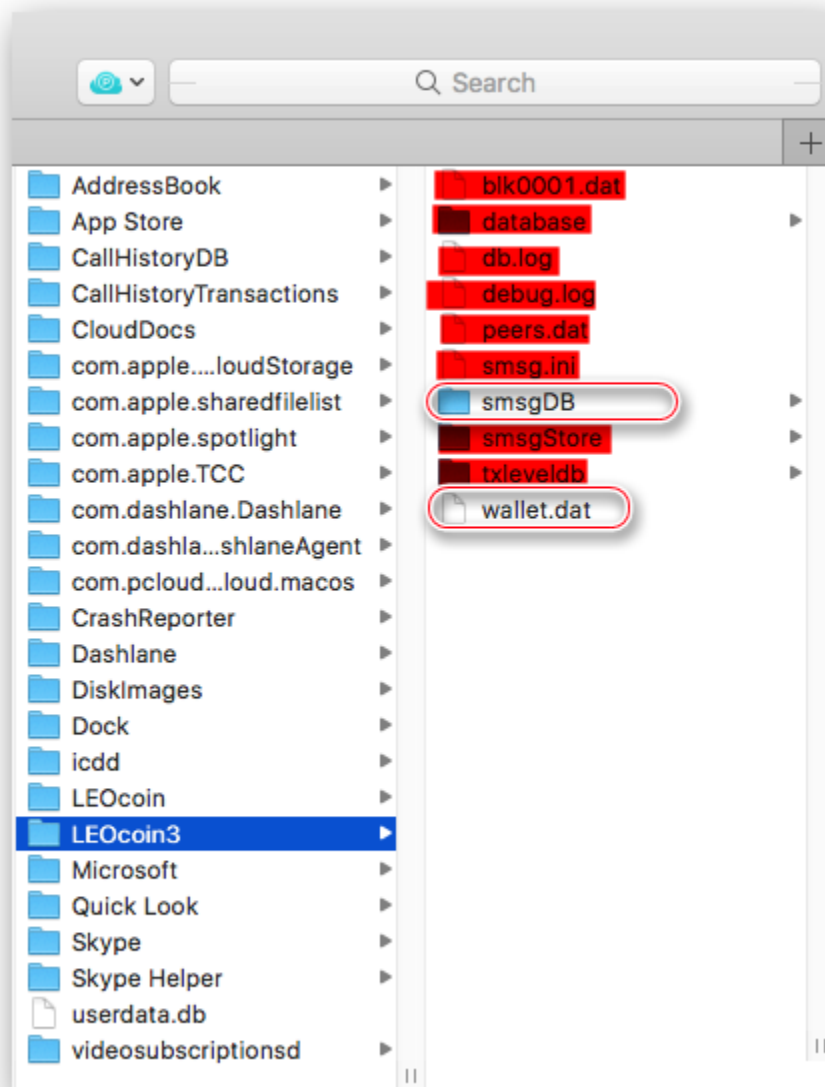

#1 in **blue** color (above image) is the name of the MAC system, and it will probably be different on your MAC.

#3 in **blue** color (above image) is the 'username' and will be different on your MAC than in the picture above.

4. To Resync your wallet, once you have made a safe backup on a USB stick and another Hard Disk, you will have to delete several files.

Make sure that your wallet is not running (check your Dock too) before performing any deletion of files and then delete all the files in **LEOcoin3** folder, **EXCEPT "msgDB" folder and "wallet.dat"** (or any other backup wallet files you have saved in this folder).

5. Open your LEOcoin wallet and wait for it to sync 100% fully. You will be able to watch the progress from the wallet's top menu.
